SUMMARY

B. Tech graduate in Computer Science & Engineering (AI & Machine Learning), with hands-on experience building full-stack applications in Python (Flask, FastAPI) and the MERN stack. Comfortable across the stack — REST API design, relational and NoSQL databases, authentication, and responsive front ends — with growing experience applying machine learning fundamentals to real projects.

EDUCATION

B. Tech, Computer Science & Engineering (AI & ML)

2023 – 2026

Dr Sudhir Chandra Sur Institute of Technology and Sports Complex

Related Coursework: Database Systems, Data Structures & Algorithms, Operating Systems

GPA: 7.07 / 10

Diploma, Computer Science & Technology

2020 – 2023

Durgapur Institute of Polytechnic

Related Coursework: DSA, Java, Python, DBMS, OOPS, Operating Systems

Percentage: 84%

EXPERIENCE & CONTRIBUTIONS

Open-Source Contributor | [GitHub](#)

Jan 2026 – May 2026

Tech stack: TypeScript

- Contributed 5+ merged pull requests to established TypeScript repositories, fixing bugs and adding small features.
- Followed maintainers' Git branching and rebasing conventions to keep a clean, linear commit history, and took part in code review to align changes with project standards.

Location-Based Service Platform — College Project | [GitHub](#)

Jan 2025 – June 2026

Tech stack: MERN (MongoDB, Express, React, Node.js)

- Built a full-stack platform for discovering and booking local services (mechanics, teachers, doctors, home services).
- Implemented secure JWT-based authentication, provider profiles, service listings, and a booking workflow.
- Designed REST APIs with Node.js/Express and a responsive React.js front end; modelled data with MongoDB/Mongoose.

PROJECTS

Waste Management IQ | [GitHub](#)

Apr 2026 – Present

Tech stack: Python, Flask, PostgreSQL, HTML, CSS

- Developed a waste management platform connecting citizens, collectors, recyclers, and municipalities.
- Implementing location-based pickup requests, an analytics dashboard, and a scalable backend architecture.
- Designing an AI-powered waste image classification feature to support automated recycling recommendations.

Notes App | [GitHub](#)

May 2026 – Present

Tech stack: Python, Flask, PostgreSQL, HTML, CSS

- Built a secure notes management web app with user authentication, password hashing, and full CRUD operations.
- Engineered RESTful API endpoints backed by SQLAlchemy ORM, paired with a dynamic front end for real-time data retrieval.

SKILLS

Programming Languages: Python, JavaScript, C++

Frontend: React.js, HTML, CSS

Backend: Node.js, Express.js, Flask, FastAPI

Data/AI: Pandas, NumPy, Machine Learning, Model Evaluation, Data Preprocessing

Databases: PostgreSQL, MongoDB

Tools: Git, GitHub, Jupyter Notebook, Google Colab, VS Code
